Q1 .Write a program for session management using cookies and sessions

Aim:

To develop a program for managing user sessions using cookies and sessions in Express.js.

Description:

Session management is used to store and maintain user information across multiple requests. Cookies store small amounts of data in the user's browser, while sessions store user information on the server. Express.js uses the express-session package to manage sessions and helps maintain user login information securely.

Program:-

```
let cookies = {};

let session = {};

// Create Cookie

cookies.username = "Raj";

// Create Session

session.username = "Raj";

console.log("Cookie Created:", cookies.username);

console.log("Session Created:", session.username);

// Retrieve Session

console.log("Welcome", session.username);

// Destroy Session

delete session.username;

console.log("Session Destroyed Successfully!");
```

Q 2 Write a program for working with different form fields using react forms.

Aim:

To develop a React application using different form fields to collect user information.

Description:

React Forms are used to collect user input through different form fields such as text boxes, email, radio buttons, checkboxes, and dropdown lists. React uses useState() to manage form data and onChange() to handle user input. The onSubmit() event is used to submit the form and display the entered details.

Program:-

```
import React, { useState } from 'react';

function App() {
  const [submitted, setSubmitted] = useState(false);

  return (
    <div>
      <h2>Student Registration Form</h2>

      <form onSubmit={(e) => {
        e.preventDefault();
        setSubmitted(true);
      }}>
        Name:
        <input type="text" required />
        <br /><br />

        Email:
        <input type="email" required />
        <br /><br />
```

```
      Gender:
      <input type="radio" name="gender" value="Male" required /> Male
      <input type="radio" name="gender" value="Female" /> Female
      <br /><br />

      Course:
      <select>
        <option>CSE</option>
        <option>ECE</option>
        <option>IT</option>
      </select>
      <br /><br />

      <button type="submit">Submit</button>
    </form>

    {submitted && (
      <h2 style={{color: 'green'}}>
        Successfully Submitted!
      </h2>
    )}
  </div>
 );
}

export default App;
```
